

Nature

Read the passage below and answer the following questions.

Nature is full of amazing things to discover. From towering trees to colorful flowers, there is so much beauty all around us. Have you ever wondered how plants grow? Well, plants need sunlight, water, and nutrients from the soil to survive. They use a process called photosynthesis to turn sunlight into food.

Animals also play a big role in nature. Birds chirping, butterflies fluttering, and squirrels scurrying are all part of the natural world. Animals have different habitats, which are like their homes. Some live in the forest, while others prefer the ocean or the desert.

Nature is not just about plants and animals. It also includes breathtaking landscapes like mountains, rivers, and waterfalls. These natural wonders provide us with fresh air, clean water, and a place to explore and have fun.

It's important to take care of nature and protect it. We can do this by not littering, recycling, and conserving water. By being responsible and respectful towards nature, we can ensure that future generations can also enjoy its beauty.

Nature

Read the passage again and answer the questions.

1) What are three things that plants need to survive?

2) What is the process called that plants use to turn sunlight into food?

3) Can you name three different habitats where animals live?

4) What are some examples of natural landscapes mentioned in the passage?

5) Why is it important for us to take care of nature? What are some actions we can take to protect it?
