

# Recycling

Read the passage below and answer the following questions.

Recycling is a way to help the Earth by reusing things instead of throwing them away. It's like giving old things a new life! When we recycle, we can turn things like paper, plastic, glass, and metal into new things. This helps to save resources and protect our planet.

There are different types of recycling. For example, when we recycle paper, old newspapers and cardboard can be made into new paper products like notebooks or tissue paper. Plastic bottles can be recycled and turned into new plastic items like toys or even new bottles.

1) What is recycling?

---

2) Why is recycling important?

---

3) Name some materials that can be recycled.

---
